## DETAILED ACTION

### *Drawings*

1. Figure 1a and 1b should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: the reference number 28 is mentioned in the specification in the third line from the bottom of page 3 however it is not shown in any of the drawings. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective

action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

3. The disclosure is objected to because of the following informalities: there appears to be a typographical error in page 10, the second line of paragraph [44]. There is only a closed parenthesis. Appropriate correction is required. Applicant's assistance is requested to correct any other errors that may be noticed in the application.

***Claim Rejections - 35 USC § 103***

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants admitted prior art and further in view of Rajarajan et al (NOVEL POLARIZATION-INDEPENDENT OPTICAL BENDS FOR COMPACT PHOTONIC INTEGRATED CIRCUITS, SBMO/IEEE MTT-S IMOC 1999).

Applicant's admitted prior art teaches all the claimed limitations except a polarization-independent bend. Rajarajan et al teach that by developing a bent waveguide at certain parameters, polarization-independent bend can be realized (see page 463 left column lines 16-18). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use a predetermined bend in applicant's admitted prior art to make the device polarization-independent for optimum coupling efficiency.

### ***Conclusion***

7. The prior art documents submitted by applicant have been considered and made of record (note the attached copy of form PTO-1449).

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Song et al (Scalar BPM Analyses of TE and TM Polarized Fields in Bent Waveguides, IEEE TRANSACTIONS ON ANTENNAS AND PROPAGATION, VOL, 51, No. 6, JUNE 2003). Van Dam et al (U.S. Patent 5,838,844) teaches an optical

Art Unit: 2874

coupler wherein a curved section operates as a polarization converter, making the operation of the device polarization independent. Nishimoto (U.S. Patent 4,983,006) teaches a polarization-independent optical waveguide switch.
